

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (canceled).

Claim 2 (amended): The electronic camera imaging device of claim 15, wherein said electronic image acquisition assembly means for receiving and transmitting electronic image-encoding digital information is a charge coupled device (CCD).

Claim 3 – 4 (canceled).

Claim 5 (original): A unitary electronic imaging device comprising:
a housing;
means for receiving and transmitting electronic image-encoding digital information;
a reflective flat panel display capable of being electronically addressed, in response to said electronic image-encoding digital information, to provide in reflected light a reflection image;
a reflection image viewer;
a receptacle for holding a photosensitive imaging medium; and
an optical system capable of selectively directing the reflection image reflected off said reflective flat panel display toward either (a) said receptacle for the imagewise area exposure of a photosensitive imaging medium held therein, or (b) said reflection image viewer for the viewing thereof by a user of the device.

Claim 6 (amended): The electronic camera imaging device of claim 25, wherein said receptacle for holding a photosensitive medium is a receptacle for holding a cassette of self-developing photosensitive film.

Claim 7 (amended): The electronic camera imaging device of claim 25, wherein the reflective flat panel display is a twisted or super twisted nematic liquid crystal display.

Claim 8 (amended): A method for recording an image onto a photosensitive medium comprising the steps of:

- (a) providing a photosensitive medium;
- (b) providing a reflective liquid crystal flat panel display capable of being electronically addressed in response to electronic image-encoding information to provide in reflected light a reflection image, ~~said reflective liquid crystal display being either a twisted nematic or super twisted nematic liquid crystal display;~~
- (c) electronically addressing said reflective liquid crystal flat panel display contemporaneously with the illumination thereof by a light source to produce a reflection image in reflected light; and
- (d) selectively directing said reflected light onto image reflected off said flat panel display toward either (a) said photosensitive medium for the recordation therein of said reflection image; or (b) a reflection image viewer for the viewing thereof.

Claim 9 (amended): The method of claim 38, wherein said photosensitive medium is self-developing photosensitive film.

Application Serial No. 09/653,598
Response to Office Action dated June 7, 2004
Amendment dated September 24, 2004

Claim 10 (amended): The method of claim 38, wherein said photosensitive film comprises a flexible substrate onto which is deposited a silver halide emulsion film.

Claim 11 (new): The method of claim 8 wherein said reflective flat panel display is a twisted or super twisted nematic liquid crystal display.
